### 1. What is Sahay AI?

---

**Sahay AI** is a full-lifecycle AI People Platform built for RAAPID. It replaces fragmented HR tools with a single copilot + agent fleet that automates hiring, onboarding, employee support, payroll, engagement, and governance — with humans always in control.

#### Core Principles

| PRINCIPLE                  | WHAT IT MEANS                                                                         |
|----------------------------|---------------------------------------------------------------------------------------|
| AI suggests, humans decide | The agent never auto-rejects candidates or approves high-risk actions on its own      |
| Grounded, not guessed      | Every answer cites your actual policy documents via RAG — no hallucination            |
| Multi-model, no lock-in    | Routes tasks to GPT-5.2, Claude Opus 4.8, Gemini 3.5, or on-prem Llama — swap anytime |

| PRINCIPLE                    | WHAT IT MEANS                                                                   |
|------------------------------|---------------------------------------------------------------------------------|
| Data stays in your tenant    | Private RAG + role-based access; nothing trains public models                   |
| Human-in-the-loop governance | High-risk actions always pause for human approval; every action is audit-logged |

## 2. Dashboard Walkthrough

### Home Tab

The landing page shows real-time operational health:

| WIDGET                    | WHAT IT SHOWS                                                                |
|---------------------------|------------------------------------------------------------------------------|
| Time-to-productivity      | –68% faster onboarding                                                       |
| Tickets auto-resolved     | 82% of HR queries handled by agents                                          |
| Avg. response time        | 26 hours → 3.4 seconds                                                       |
| Employee eNPS             | +51 (from –5 baseline)                                                       |
| Employee lifecycle stages | Hire → Onboard → Manage → Develop → Retain → Offboard                        |
| HR Requests chart         | Bar chart: auto-resolved vs escalated over 7 weeks                           |
| Live agent activity feed  | Real-time feed of what agents are doing right now                            |
| Business impact           | –77% manual HR workload · 48h → same-day onboarding · –95% data-entry errors |

**How to check:** Click "Home" in the sidebar. All KPI numbers animate on load with smooth count-up transitions.

### Hire Tab

The recruitment pipeline powered by the Recruiter agent:

| FEATURE                        | HOW IT WORKS                                                                                               |
|--------------------------------|------------------------------------------------------------------------------------------------------------|
| <b>Open Roles</b>              | Lists all active job postings with applicant counts and status badges (Open / Screening)                   |
| <b>+ New Job button</b>        | Opens a centered modal dialog to create a role — fields: title, department, location, type, skills, JD     |
| <b>"Draft with AI" button</b>  | Agent writes a tailored job description from the title and skills                                          |
| <b>Candidate Kanban Board</b>  | 4-column pipeline: Applied → Screening → Interview → Offer                                                 |
| <b>Drag &amp; Drop</b>         | Drag any candidate card to any column — forward or backward (undo mistakes)                                |
| <b>AI Shortlist badges</b>     | Green "AI Shortlist" badge on cards with ≥85% fit score                                                    |
| <b>Candidate Detail Drawer</b> | Click any card → slide-in panel with AI-generated reasoning, resume match, and "Move to next stage" button |

**How to check:** Click "Hire" → click a role → drag cards between columns → click a card to see the AI reasoning drawer.

## Onboard Tab

The onboarding workflow powered by the Onboarding agent:

| FEATURE                       | HOW IT WORKS                                                                                     |
|-------------------------------|--------------------------------------------------------------------------------------------------|
| <b>New Hires list</b>         | Shows employees pending Day-1 setup                                                              |
| <b>"Generate plan" button</b> | Click any new hire → loading animation → AI generates a personalized Week-1 onboarding checklist |
| <b>Checklist items</b>        | IT provisioning, HR orientation, manager meet, compliance, welcome email                         |
| <b>Welcome Email Editor</b>   | Live email preview that HR can review and send                                                   |

**How to check:** Click "Onboard" → click "Generate plan" next to Aarav Shah → watch the loading screen → see the checklist and email preview.

## Ask Sahay Tab

The employee-facing AI chatbot:

| FEATURE                 | HOW IT WORKS                                                    |
|-------------------------|-----------------------------------------------------------------|
| <b>Chat interface</b>   | Clean conversational UI with user/bot message bubbles           |
| <b>Grounded answers</b> | Every answer cites the specific policy document and section     |
| <b>Citation tags</b>    | Clickable green citation badges (e.g., "Leave-Policy.pdf §3.2") |
| <b>Suggestion chips</b> | Quick-reply buttons for common follow-up questions              |

**How to check:** Click "Ask Sahay" → type a question like "How many casual leaves do I have?" → see the cited response.

## People Tab

The employee directory and people analytics:

| FEATURE                      | WHAT IT SHOWS                                                                      |
|------------------------------|------------------------------------------------------------------------------------|
| <b>Employee table</b>        | Searchable directory with name, role, department, status                           |
| <b>Sentiment Trend chart</b> | Smooth Bezier-curve line chart showing engagement over time with hover tooltips    |
| <b>eNPS Gauge</b>            | Gradient ring gauge showing current eNPS score                                     |
| <b>Talent Insights Radar</b> | 5-trait radar chart (Technical, Leadership, Communication, Adaptability, Teamwork) |

**How to check:** Click "People" → hover over the sentiment chart points → check the eNPS gauge and radar chart.

## Leaves Tab

The leave and attendance management command center powered by the Leave & Attendance agent:

| FEATURE                          | HOW IT WORKS                                                                                                                                                                                                                                                       |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Leave requests queue</b>      | Lists pending leave requests with AI-generated pre-screening, policy rules checking, and dynamic team conflict warnings (e.g. Vikram Seth's paternity leave conflict with Priya Nair's annual leave).                                                              |
| <b>Interactive Approvals</b>     | Approve or Reject button actions. Approving a leave dynamically subtracts days from the employee's balance ledger, triggers a success toast, updates the coverage calendar, and writes to the Governance Audit Log in real time.                                   |
| <b>Balance Ledger</b>            | Select an employee from the dropdown list to see their live remaining and taken days (Casual Leave, Earned Leave, Sick Leave, Paternity Leave).                                                                                                                    |
| <b>Coverage Heatmap Calendar</b> | A beautifully rendered visual presence calendar for June 2026. Green indicates full presence, Amber indicates a single planned absence, and <b>Rose (Red) indicates critical overlaps (under-staffed days)</b> that update automatically as requests are approved. |

**How to check:** Click "Leaves" → check the pending queue → select different employees in the dropdown to view balances → click **Approve** on Vikram Seth's request and watch the calendar heatmap automatically highlight June 18–20 in **red** due to the overlap with Priya's leave!

## Control Center Tab

The admin's command center with 5 sub-panels:

| SUB-PANEL           | WHAT IT CONTAINS                                                                                                      |
|---------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>Agent Fleet</b>  | All 12 agents — 7 live, 5 roadmap. Click any agent tile for detailed drawer (how it works, sample run, tools, impact) |
| <b>Governance</b>   | Human approval queue + audit trail. Approve/reject agent proposals. Every decision is logged with timestamp           |
| <b>Knowledge</b>    | Document library (policy PDFs, handbooks). Upload/delete docs. Agents answer from these                               |
| <b>Setup</b>        | Multi-model router (Auto / Cost-optimized / Quality-first) + Integration status (HRIS, Slack, Email, etc.)            |
| <b>How It Works</b> | Architecture diagram + request flow + CTO-grade design rationale                                                      |
| <b>Compare</b>      | Side-by-side comparison table vs Leena AI, Moveworks, and build-in-house                                              |

**How to check:** Click "Control Center" → click through each sub-tab → approve/reject items in the Governance queue → click agent tiles for detail drawers.

### 3. Agent Fleet

#### Live Agents (7) — In the Pilot Today

| # | AGENT                         | DEPARTMENT       | TASKS/<br>MO | WHAT IT DOES                                                                                     |
|---|-------------------------------|------------------|--------------|--------------------------------------------------------------------------------------------------|
| 1 | <b>HR Helpdesk</b>            | Employee Support | 3,180        | Answers policy, leave, IT & benefits questions from your documents — instantly, with citations   |
| 2 | <b>Onboarding</b>             | Onboarding       | 410          | Turns "offer accepted" into a fully set-up Day 1 — plan, provisioning and warm welcome           |
| 3 | <b>Recruiter</b>              | Recruitment      | 1,240        | Screens & ranks applicants on job-fit. Bias-audited and explainable. Never auto-rejects          |
| 4 | <b>Interview Scheduler</b>    | Recruitment      | 860          | Coordinates interview slots, invites and reminders across everyone's calendars                   |
| 5 | <b>Engagement / VoE</b>       | Engagement       | 480          | Runs pulse surveys, tracks eNPS and themes sentiment from open feedback                          |
| 6 | <b>Payroll Analyst</b>        | Operations       | 640          | Detects payroll anomalies and variances before pay-run. Proposes fix → human approves            |
| 7 | <b>Leave &amp; Attendance</b> | Operations       | 1,460        | Applies and approves leave, tracks balances. Auto-approves within policy; else routes to manager |

#### Roadmap Agents (5) — Same Pattern, Next Phase

| # | AGENT                          | DEPARTMENT | WHAT IT DOES                                                   |
|---|--------------------------------|------------|----------------------------------------------------------------|
| 8 | <b>Goals &amp; Performance</b> | Develop    | Helps set & track goals, summarizes 1:1s into clear highlights |
| 9 | <b>Learning Tutor</b>          | Develop    | Personalized micro-learning in the flow of work                |

| #  | AGENT                  | DEPARTMENT | WHAT IT DOES                                                                    |
|----|------------------------|------------|---------------------------------------------------------------------------------|
| 10 | <b>Talent Assessor</b> | Hire       | Big Five / role-fit insights and high-potential signals — decision support only |
| 11 | <b>Offboarding</b>     | Offboard   | Exit checklist, knowledge handover, access deprovisioning                       |
| 12 | <b>Policy Analyst</b>  | Governance | Step-by-step, cited guidance across employee lifecycle policies                 |

## 4. Architecture

### How a Request Flows

1. **Employee asks** in chat, Slack, or email
2. **Copilot understands** the intent and routes to the right agent
3. **Agent retrieves** relevant policy/data via RAG + system APIs
4. **Multi-model router** picks the best AI model for the task
5. **Low-risk** → instant response | **High-risk** → pauses for human approval
6. **Every action logged** in the audit trail

## Why This Design

- **No new app to learn** — employees use Slack / Teams / email
- **Managers approve** on mobile, in seconds
- **HR runs & oversees** everything in Sahay's dashboard
- **Multi-model** — best model per task; switch providers with zero rework
- **On-prem option** for sensitive data (Llama 3.1)

## 5. Security & Governance

| AREA                 | HOW SAHAY HANDLES IT                                                                |
|----------------------|-------------------------------------------------------------------------------------|
| Data residency       | All data stays in your tenant; no data sent to public model training                |
| RAG grounding        | Answers cite your actual documents — no invented facts                              |
| Human-in-the-loop    | High-risk actions (payroll corrections, terminations) always require human approval |
| Audit trail          | Every agent + human action is timestamped and logged                                |
| Role-based access    | Only authorized roles see sensitive data                                            |
| Bias auditing        | Recruiter agent's decisions are bias-audited and explainable                        |
| Model routing        | Sensitive data routes to on-prem Llama; general queries use cloud models            |
| Integration security | All system connections via official APIs (no scraping, no unauthorized access)      |

## 6. Competitive Analysis

### Sahay AI vs Leena AI vs Moveworks vs Build In-House

| CAPABILITY             | SAHAY (OURS)       | LEENA AI       | MOVEWORKS               | BUILD IN-HOUSE |
|------------------------|--------------------|----------------|-------------------------|----------------|
| Time to a useful pilot | ✓✓ Weeks           | ~ Weeks–months | ~ Months                | × Months+      |
| Annual cost            | ✓✓ Lean / tailored | × \$100K+      | × Enterprise \$\$<br>\$ | ~ Eng cost     |

| CAPABILITY                         | SAHAY (OURS)    | LEENA AI       | MOVEWORKS      | BUILD IN-HOUSE |
|------------------------------------|-----------------|----------------|----------------|----------------|
| <b>Tailored to RAAPID</b>          | ✓✓ Custom-built | ~ Configurable | ~ Configurable | ✓✓ Custom      |
| <b>Multi-model · no lock-in</b>    | ✓ Multi-model   | ~ Partial      | × Their stack  | ✓ Full control |
| <b>Data stays in your tenant</b>   | ✓ Yes           | ~ Vendor cloud | ~ Vendor cloud | ✓ Yes          |
| <b>Governance · human-in-loop</b>  | ✓ Built-in      | ✓ Yes          | ✓ Yes          | ~ Build it     |
| <b>Integration breadth (today)</b> | ~ Main, growing | ✓✓ Deep        | ✓✓ Deep        | × Build it     |
| <b>Proven maturity / scale</b>     | ~ New           | ✓✓ Mature      | ✓✓ Mature      | × Unproven     |

**Legend:** ✓✓ = strong | ✓ = yes | ~ = partial | × = no

## The Honest Take

**Where Leena AI & Moveworks win:** - **More mature** products with proven enterprise deployments - **Deeper out-of-the-box integrations** (HRIS, ITSM, payroll connectors ready) - **Established customer base** — lower perceived risk

**Where Sahay wins:** - **Cost** — significantly leaner pricing, tailored to RAAPID's scale - **Speed to pilot** — weeks, not months - **Tailored** — built specifically for RAAPID's processes, not generic - **Multi-model / no vendor lock-in** — switch between GPT, Claude, Gemini, or on-prem Llama - **Data sovereignty** — your data stays in your tenant, not a vendor cloud - **Transparency** — every agent decision is explainable and auditable

### Important Caveat:

Our column is a **pre-pilot projection**, not a proven benchmark. The competitor facts (e.g., Leena AI ≈ \$100K+/yr, deploys in weeks–months) are from public sources. We earn our ticks in the pilot.

## Detailed Competitor Profiles

### Leena AI

| ASPECT            | DETAIL                                                           |
|-------------------|------------------------------------------------------------------|
| <b>Founded</b>    | 2018, Mumbai                                                     |
| <b>Funding</b>    | \$37M+ (Series B)                                                |
| <b>Focus</b>      | Enterprise HR virtual assistant, employee engagement, onboarding |
| <b>Pricing</b>    | ~\$100K+/year for enterprise                                     |
| <b>Deployment</b> | Cloud (SaaS); 2–6 months typical                                 |
| <b>Strengths</b>  | Deep HRIS/ITSM integrations, mature product, proven at scale     |
| <b>Weaknesses</b> | Expensive, vendor lock-in, data resides on vendor cloud          |
| <b>AI Model</b>   | Proprietary models; limited model choice                         |

### Moveworks

| ASPECT            | DETAIL                                                                   |
|-------------------|--------------------------------------------------------------------------|
| <b>Founded</b>    | 2016, Mountain View                                                      |
| <b>Funding</b>    | \$305M+ (Series C, \$2.1B valuation)                                     |
| <b>Focus</b>      | Enterprise AI copilot for IT + HR + Finance                              |
| <b>Pricing</b>    | Enterprise pricing (\$\$\$\$); typically \$100K–\$500K+/year             |
| <b>Deployment</b> | Cloud; typically 3–6 months                                              |
| <b>Strengths</b>  | Best-in-class IT automation, deep enterprise integrations, massive scale |
| <b>Weaknesses</b> | Very expensive, locked to their AI stack, overkill for mid-market        |
| <b>AI Model</b>   | Proprietary MoveLM; no model flexibility                                 |

### Build In-House

| ASPECT      | DETAIL                                      |
|-------------|---------------------------------------------|
| <b>Cost</b> | Engineering salaries (2–4 devs × 6+ months) |
| <b>Time</b> | 6–12+ months to a basic MVP                 |

| ASPECT     | DETAIL                                                                   |
|------------|--------------------------------------------------------------------------|
| Strengths  | Full control, custom to your needs                                       |
| Weaknesses | Slow, expensive, ongoing maintenance burden, no pre-built agent patterns |

## 7. Business Impact

| METRIC                | BEFORE SAHAY | AFTER SAHAY | CHANGE        |
|-----------------------|--------------|-------------|---------------|
| Manual HR workload    | 100% manual  | 23% manual  | -77%          |
| Onboarding cycle      | 48 hours     | Same-day    | ≈24x faster   |
| Data-entry errors     | Frequent     | Near-zero   | -95%          |
| HR ticket resolution  | 26 hours avg | 3.4 seconds | 99.99% faster |
| Tickets auto-resolved | 0%           | 82%         | +82%          |
| Employee eNPS         | -5           | +51         | +56 points    |
| Screening time        | Full manual  | AI-assisted | -70%          |

Note: These are industry-benchmark projections. Actual numbers will be validated during the pilot.

## 8. Mockup Checklist

Use this checklist when demonstrating the mockup to stakeholders:

### Pre-Demo Setup

- [ ] Open `index.html` in Chrome/Edge (latest version)
- [ ] Maximize the browser window (1920×1080 recommended)
- [ ] Start on the **Home** tab

### Home Tab

- [ ] KPI cards animate with count-up numbers on load
- [ ] Bar chart shows auto-resolved vs escalated breakdown

- [ ] Live agent activity feed is visible
- [ ] Business impact numbers animate (–77%, same-day, –95%)
- [ ] Employee lifecycle stages are clickable

## Hire Tab

- [ ] Open Roles card shows 3 roles with applicant counts
- [ ] Click **" + New Job "** → modal opens with blurred background
- [ ] Click **"Draft with AI"** → job description auto-fills
- [ ] Click **"Cancel"** → modal closes smoothly
- [ ] Kanban board shows 4 columns: Applied → Screening → Interview → Offer
- [ ] **Drag** a candidate card to another column → card moves, toast confirms
- [ ] **Drag back** to undo — works in any direction
- [ ] Empty columns show "Drag here" dashed placeholder
- [ ] Click a candidate card → detail drawer slides in with AI reasoning
- [ ] Click **"Move to Interview"** in the drawer → card advances

## Onboard Tab

- [ ] New hires list is visible
- [ ] Click **"Generate plan"** → loading animation plays
- [ ] Week-1 checklist appears with checkable items
- [ ] Welcome email preview is editable

## Leaves Tab

- [ ] Leaves sidebar navigation tab is visible and clickable
- [ ] KPI cards animate with count-up numbers on load
- [ ] Select different employees in the dropdown → leave balances ledger cards update dynamically
- [ ] Under-staffed calendar heatmap renders June 2026 dates (Priya Nair off on Jun 18-20 is amber)
- [ ] Click **"Approve"** on Vikram Seth's Paternity Leave request → balance updates, toast confirms
- [ ] Calendar heatmap dynamically colors June 15-25 as amber, and **June 18-20 as red** (due to overlap conflict warning with Priya Nair!)
- [ ] Go to **Control Center** → **Governance** → verify the human approval is written to the audit log trail in real-time

## Ask Sahay Tab

- [ ] Chat interface loads with suggestion chips
- [ ] Type a question → bot responds with cited answer

- [ ] Citations show green tags with policy references

## People Tab

- [ ] Employee table is searchable
- [ ] Sentiment line chart has smooth Bezier curves with hover tooltips
- [ ] eNPS gauge ring animates
- [ ] Talent radar chart is visible with trait labels

## Control Center

- [ ] **Agent Fleet:** 7 live + 5 roadmap agent tiles visible. Click any tile → detail drawer opens
- [ ] **Governance:** Approval queue with Approve/Reject buttons. Click → logged in audit trail
- [ ] **Knowledge:** Document list visible. Upload button works (mock)
- [ ] **Setup:** Multi-model router with Auto/Cost/Quality toggle. Integration status list
- [ ] **How It Works:** Architecture diagram + flow + design reasons visible
- [ ] **Compare:** Comparison table vs Leena AI, Moveworks, Build In-House

## Theme Toggle

- [ ] Click the **moon icon** (top-right) → dark mode activates smoothly
- [ ] All components render correctly in dark mode
- [ ] Click again → light mode restores

## General

- [ ] No console errors (F12 → Console tab)
- [ ] All hover effects and animations are smooth
- [ ] Search bar expands on focus
- [ ] Model selector dropdown works (Auto-route / GPT / Claude / Gemini / Llama)

## Quick Pitch (30-Second Elevator)

---

"Sahay AI is RAAPID's own AI People Platform — one dashboard where 12 AI agents handle hiring, onboarding, employee queries, payroll checks, and engagement tracking. Every answer is grounded in your actual policies. Every risky action pauses for a human. You can swap AI models anytime. Your data never leaves your tenant. And it costs a fraction of Leena AI or Moveworks."
